Dear [Redacted]

STAT

INSTALL UNDERGROUND GET-A-WAY
IMPROVEMENT OUT OF THE VEPKO C.I.A.
SUBSTATION

Enclosed are four sets of Virginia Electric and Power Company sketches, Estimate No. 44-78840-00 that show proposed underground cables to be installed by direct burial and in the existing Vepco duct bank, which originates at the Vepco C.I.A. Substation and running in a southerly direction to Georgetown Pike. The direct buried portion will be approximately 200 feet, originating at poles KU-11 and KU-22 and entering the existing duct bank at the point indicated on the attached sketch.

This proposed installation is a revision of the request made by letter, dated November 12, 1981.

This installation is needed in order to meet the increasing demand of electricity in the surrounding area.

I shall appreciate it if you will consider this proposal and, if it meets with your approval, give us a letter authorizing us to proceed with this work.

Should you desire more information, please call [Redacted] at 838-2442.

STAT

Yours very truly,
